

Now that you're all set with your registration for the webinar, we've prepared two simple and imaginative activities for you to do before the workshop. Your engagement in these pre-event activities will enhance the dynamic exchange we'll have during the workshop. We encourage you to bring your creations from the pre-event activities to share and discuss in the workshop. **If you run out of time, don't fret – you can still participate in the workshop**, and there's no pressure to showcase your masterpieces if you prefer not to.

Photovoice Activity - pre-event instructions

Before the workshop, please either take a new photo or locate an existing photo you've taken that represents a place you feel connected to. Jot down a sentence or two explaining your connection to that place (for example, *why it's important to you, how it makes you feel, what you value about it*, etc.). Be prepared to share your photo and thoughts during a small group activity at the beginning of our workshop!

Climate Data Art Activity - pre-event instructions

For this Climate Data Art activity, before the workshop, you will be creating a quick art piece that incorporates some type of data (like a graph). The goal is to use visuals to help tell the story about the data, and thus what the underlying topic means to you: *Why is it important to you or others?* As you create your piece, consider what the focus of your art story will be.

Note: The goal is to start this process and begin creating a visual story. It is about creativity, not technical art skills, so just focus on what you want to share! If you just have a rough sketch or do not finish that's okay. You may also keep working on your art piece after the workshop. **Also, if you are not able to create an art piece** before the event, please just choose from the graphs below and think about *how you would depict that topic visually*.

Step 1. Choose a graph and print it out or trace it onto a separate sheet of paper.

Step 2. Brainstorm ideas for the artwork. I recommend sketching out or writing out ideas on scrap paper.

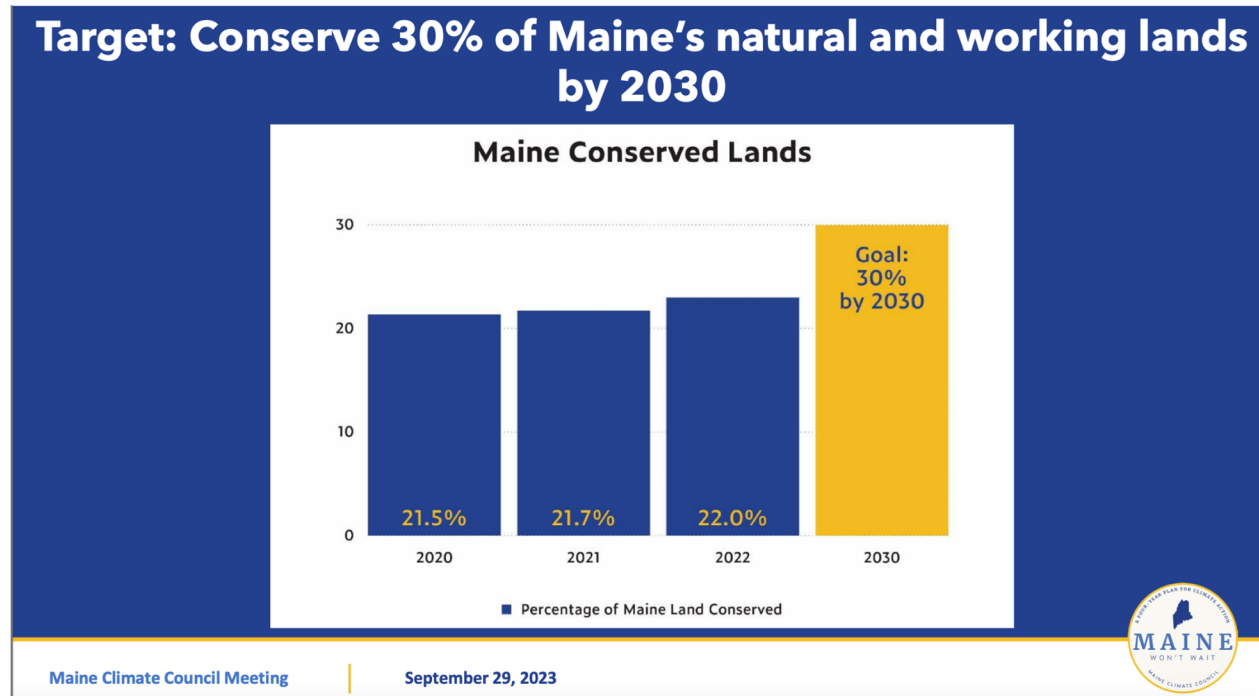

Step 3. Start to create your final artwork with the graph with pencil or any other materials. You may create your art piece directly on the printed/traced graph.

Materials needed:

- Graph (please print it out or trace it from your computer). *Have it ready before the event.*
- Scrap paper
- Pencil
- Optional: ruler
- Optional: any coloring supplies of your choice. Feel free to use any materials you choose- colored pencil, paint, markers, etc.

Graph options are included below (there are 4, each on a different page). All of the graphs are from the Maine Climate Council's [Maine Won't Wait 2023 Updated Report](#) from September 29, 2023. Please choose one of these graphs. Or, if preferred, you may choose a different graph if there is a topic in the report or elsewhere you would like to communicate about.
